

AMENDMENTS TO THE CLAIMS

1-2. (Canceled)

3. (Currently Amended) The personal Web guide system of Claim ~~[[1]]~~ 10, wherein the schedule program memory includes a plurality of schedule programs predefined under a plurality of categories, respectively, each of which is selectable by the client system.

4. (Currently Amended) The personal Web guide system of Claim ~~[[1]]~~ 10, wherein the client system is selected from a group consisting of a TV settop box system, a mobile phone, and a personal digital assistant.

5-6. (Canceled)

7. (Currently amended) The personal Web guide system of Claim ~~[[6]]~~ 10, wherein the display control program ~~further~~ defines scrolling of at least one of the plurality of temporary Web pages.

8. (Currently amended) The personal Web guide system of Claim ~~[[6]]~~ 10, wherein the display control program defines reformatting of at least one of the plurality of temporary Web pages ~~is reformatted for display on the client system.~~

9. (Canceled)

10. (Currently amended) A personal Web guide system which allows a user of a client system to browse Web information according to a predetermined schedule, the system comprising:

a host workstation comprising a schedule program memory, the memory including a schedule program in which a plurality of Internet resource addresses are registered in predetermined sequential order;

a schedule program server connected to the host workstation, the schedule program server being configured to receive a schedule program from the host workstation, to interpret the

received schedule program, and to create a plurality of temporary Web pages and a display control program based on the received schedule program, the plurality of temporary Web pages being created based on a plurality of Web pages available at the plurality of Internet resource addresses as registered in the schedule program, respectively, and the display control program defining a display format and display period of each of the temporary Web pages; and

a client system including a display, the client system being configured to download the display control program from the schedule program server, and then to download ~~and display~~ the temporary Web pages from the schedule program server and display each of them in the predetermined sequential order in the defined display format and display period according to the downloaded display control program.

11. (Currently amended) An article comprising a computer-readable signal-bearing medium including computer-executable instructions, wherein the instructions when loaded onto a computer, which functions as a schedule program server, perform the steps of:

~~receiving user input of a plurality of Internet resource addresses in user-selected sequential order; and~~

~~generating~~ receiving a schedule program in which ~~[[the]]~~ a plurality of Internet resource addresses are registered in ~~[[the]]~~ a user-selected sequential order,

interpreting the received schedule program,

creating a plurality of temporary Web pages from a plurality of Web pages available at the plurality of Internet resource addresses as registered in the interpreted schedule program,

based on the interpreted schedule program, creating a display control program defining a display format and display period of each of the plurality of temporary Web pages,

sending the display control program to a client system,

receiving a request for the temporary Web pages from the client system, and

sending the temporary Web pages to the client system according to the request.

12. (Original) The article of Claim 11, wherein the medium is a recordable data storage medium.

13. (Original) The article of Claim 11, wherein the medium is a modulated carrier signal.

14-33. (Canceled)
